

Tool 8-2. Performance Intervention Selection Rating

To use this tool

- List the recommended actions you checked off in Table 7-1 in the interventions column.
- With your team or stakeholder group, rate the appropriateness, economics, feasibility, and performer acceptability for each intervention. Use a 4 to 0 scale as follows: 4 = excellent fit—absolutely no problem; 3 = good fit—we can do it even if it's a bit of a problem; 2 = poor fit—we can do it, but it's not great or it really causes problems; 1 = very poor fit—only do it as a last resort or it's a very big problem; 0 = not possible, no way—fatal flaw (a single 0 totally eliminates the intervention). Discuss, argue, and come to a consensus for each rating.

| Interventions | Selection Criteria | | | | Total | Rank | Retain (✓) |
|---------------|--------------------|-----------|-------------|---------------|-------|------|---------------|
| | Appropriateness | Economics | Feasibility | Acceptability | | | |
| | | | | | | | |
